**NEW QUESTION: 1**Your network contains an Active Directory forest named contoso.com.You plan to deploy 200 Hyper-V hosts by using Microsoft System Center 2012 Virtual Machine Manager (VMM) Service Pack 1 (SP1).You add a PXE server to the fabric.You need to identify which objects must be added to the VMM library for the planned deployment.What should you identify? (Each correct answer presents part of the solution. Choose all that apply.)**A.** A service template**B.** A generalized image**C.** A hardware profile**D.** A capability profile**E.** A host profile  
**Answer: B, E**Explanation:Templates and profiles are used to standardize the creation of virtual machines and services. These configurations are stored in the VMM database but are not represented by physical configuration files. There are several new types of templates and profiles in VMM, most of which are used for service creation. There are also host profiles, used for deploying a Hyper-V host from a bare-metal computer, and capability profiles, used to specify the capabilities of virtual machines on each type of supported hypervisor when virtual machines are deployed to a private cloud.Note:\* host profile:A Virtual Machine Manager library resource that contains hardware and operating system configuration settings to convert a bare-metal computer to a managed Hyper-V host.\* capability profile:A Virtual Machine Manager library resource that defines which resources (for example,number of processors or maximum memory) are available to a virtual machine that is created in a private cloud.

**NEW QUESTION: 2**You manage an application deployed to virtual machines (VMs) on an Azure virtual network named corpVnet1.You plan to hire several remote employees who will need access to the application on corpVnet1.You need to ensure that new employees can access corpVnet1. You want to achieve this goal by using the most cost effective solution.Which two actions should you perform? Each correct answer presents part of the solution.**A.** Enable point-to-point connectivity for corpVnet1.**B.** Convert corpVnet1 to a regional virtual network.**C.** Enable site-to-site connectivity for corpVnet1.**D.** Create a VPN subnet.**E.** Create a gateway subnet.**F.** Enable point-to-site connectivity for corpVnet1.**Answer: D, F**Explanation:A point-to-site VPN also allows you to create a secure connection to your virtual network. In a point-to-site configuration, the connection is configured individually on each client computer that you want to connect to the virtual network. Point-to-site connections do not require a VPN

device. They work by using a VPN client that you install on each client computer. The VPN is established by manually starting the connection from the on-premises client computer. You can also configure the VPN client to automatically restart.

**NEW QUESTION: 3A. Option CB. Option AC. Option BD. Option D Answer: A**
