NEW QUESTION: 2During the installation process of a VNX for Block and File system, you are prompted to change passwords for the default accounts.Which user password can be changed?

A. administrator**B. admin****C. storageadmin****D. sysadmin****Answer: D**

NEW QUESTION: 3An organization is hosting a scalable web application using AWS. The organization has configured ELB and Auto Scaling to make the application scalable. Which of the below mentioned statements is not required to be followed for ELB when the application is planning to host a web application on VPC?**A. The internet facing ELB should be only in a public subnet.****B. Configure the security group rules and network ACLs to allow traffic to be routed between the subnets in the VPC.****C. The ELB and all the instances should be in the same subnet.****D. The internet facing ELB should have a route table associated with the internet gateway.**

Answer: C**Explanation:**Amazon Virtual Private Cloud (Amazon VPC) allows the user to define a virtual networking environment in a private, isolated section of the Amazon Web Services (AWS) cloud. The user has complete control over the virtual networking environment. Within this virtual private cloud, the user can launch AWS resources, such as an ELB, and EC2 instances. There are two ELBs available with VPC: internet facing and internal (private) ELB. For the internet facing ELB it is required that the ELB should be in a public subnet. After the user creates the public subnet, he should ensure to associate the route table of the public subnet with the internet gateway to enable the load balancer in the subnet to connect with the internet. The ELB and instances can be in a separate subnet. However, to allow communication between the instance and the ELB the user must configure the security group rules and network ACLs to allow traffic to be routed between the subnets in his VPC.
