This mode should SW-A(config-if)#channel-protocol lacp be done with a non-proprietary protocol, SW-A(config-if)#no shutdown with SwitchA controlling activation. ----- SW-B(config)#interface range Fa0/3 - 4 SW-B(config-if)#channel-group 1 mode passive SW-B(config-if)#channel-protocol lacp SW-B(config-if)#no shutdown-----Maybe the interface Port-channel 1 was configured on both switches so we don't configure it here. If not we have to configure them with "interface port-channel1" command. Also you have to turn them up.- Propagation of unnecessary broadcasts SW-A(config)#interface range Fa0/3 - 4 should be limited using manual pruning on SW-A(config-if)#switchport trunk allowed this trunk link. vlan 1,21-23----- SW-B(config)#interface range Fa0/3 - 4SW-B(config-if)#switchport trunk allowedvlan 1,21-23 You may have to configure Interface Port-Channel on both switches. Check the configuration first, if it does not exist, use these commands:interface port-channel1switchport mode trunk switchport trunk native vlan 99 //this command will prevent the "Native VLAN mismatched" error on both switches switchport trunk allowed vlan 1,21-23,99 Some notes for this sim:+ You should check the initial status of both switches with these commands: show vtp status (transparent mode on switchA and we have to set the same mode on switchB), show spanning-tree [summary] (rapid-pvst mode on switchA and we have to set the same mode on switchB), show vlan (check the native vlan and the existence of vlan99), show etherchannel 1 port-channel and show ip int brief (check if Port-channel 1 has been created and make sure it is up), show run (to check everything again).+ When using "int range f0/x - y" command hit space bar before and after "-" otherwise the simulator does not accept it.+ You must create vlan 99 for the switchB. SwitchA already have vlan 99 configured.+ At the end, you can try to ping from SwitchB to RouterA (you can get the IP on RouterA via the show cdp neighbors detail on SwitchA), not sure if it can ping or not. If not, you can use the "ip default-gateway 192.168.1.1" on SwitchB.+ The name of SwitchA and SwitchB can be swapped or changed so be careful to put your configuration into appropriate switch.
