NEW QUESTION: 1At what stage of the cyber kill chain theory model does data exfiltration occur?
A. Actions on objectives
B. Weaponization
C. Command and control
D. installation
Answer: A
Explanation:The longer an adversary has this level of access, the greater the impact. Defenders must detect this stage as quickly as possible and deploy tools which can enable them to gather forensic evidence. One example would come with network packet captures, for damage assessment. Only now, after progressing through the primary six phases, can intruders take actions to realize their original objectives. Typically, the target of knowledge exfiltration involves collecting, encrypting and extracting information from the victim(s) environment; violations of knowledge integrity or availability are potential objectives also . Alternatively, and most ordinarily , the intruder may only desire access to the initial victim box to be used as a hop point to compromise additional systems and move laterally inside the network. Once this stage is identified within an environment, the implementation of prepared reaction plans must be initiated. At a minimum, the plan should include a comprehensive communication plan, detailed evidence must be elevated to the very best ranking official or board , the deployment of end-point security tools to dam data loss and preparation for briefing a CIRT Team. Having these resources well established beforehand may be a "MUST" in today's quickly evolving landscape of cybersecurity threats

NEW QUESTION: 2After being infected with a virus, a user's computer does not recognize the user as having local administrator rights to the computer. After troubleshooting the issue, a technician determines the computer needs to be rebuilt and data needs to be restored from the user's backup. Which of the following tools would BEST reset the computer to how it worked when first purchased?
A. System Restore
B. Recovery Console
C. Factory restore
D. Anti-malware software
Answer: C

NEW QUESTION: 3What are Ethereum Nodes?
A. A Java-Script library to compile and run Solidity Code.
B. Programs implementing the Ethereum Protocol to talk to each other and

JSON-RPC interfaces to talk to the outside world.**C.** A Framework for deploying and running smart contract in a decentralized way.**Answer: B**
