NEW QUESTION: 2Sir Giles's irritating reserve, not even excused by a word of apology, reached the limits of his endurance.He respectfully protested. "I regret to find, sir," he said, "that I have lost my place in my employer's estimation. The man to whom you confide the superintendence of your clerks and the transaction of your business has, I venture to think, some claim (under the present circumstances) to be trusted." The banker was now offended on his side."I readily admit your claim," he answered, "when you are sitting at your desk in my office. But, even in these days of strikes, co-operations, and bank holidays, an employer has one privilege left-he has not ceased to be a Man, and he has not forfeited a man's right to keep his own secrets. I fail to see anything in my conduct which has given you just reason to complain."Dennis, rebuked, made his bow in silence, and withdrew.Did these acts of humility mean that he submitted? They meant exactly the contrary. He had made up his mind that Sir Giles Mountjoy's motives should, sooner or later, cease to be mysteries to Sir Giles Mountjoy's clerk.Which selection identifies the device exemplified with "Did these acts of humility mean that he submitted?"last paragraph?**A.** rhetorical question**B.** obviate information**C.** query**D.** submission**E.** curio**Answer: A****Explanation:**Explanation/Reference:Explanation:The question asked that there is already a known answer to is considered rhetorical as it is unnecessary and usually used in literature for effect.

NEW QUESTION: 3When two MST instances (MST 1 and MST 2) are created on a switch, what is the total number of spanning-tree instances running on the switch?**A. 0B. 1C. 2D. 3****Answer: C****Explanation:**Explanation/Reference:Explanation:Unlike other spanning tree protocols, in which all the spanning tree instances are independent, MST establishes and maintains IST, CIST, and CST spanning trees:An IST is the spanning tree that runs in an MST region.Within each MST region, MST maintains multiple spanning tree instances. Instance 0 is a special instance for a region, known as the IST. All other MST instances are numbered from 1 to 4094. In the case for this question, there will be the 2 defined MST instances, and the special 0 instance, for a total of 3 instances.The IST is the only spanning tree instance that sends and receives BPDUs. All of the other spanning tree instance information is contained in MSTP records (M-records), which are encapsulated within MST BPDUs. Because the MST BPDU carries information for all instances, the number of BPDUs that need to be processed to support multiple spanning tree instances is

significantly reduced. All MST instances within the same region share the same protocol timers, but each MST instance has its own topology parameters, such as root bridge ID, root path cost, and so forth. By default, all VLANs are assigned to the IST. An MST instance is local to the region; for example, MST instance 1 in region A is independent of MST instance 1 in region B, even if regions A and B are interconnected. A CST is a collection of the ISTs in each MST region. The CST interconnects the MST regions and single spanning trees.
