There are so many various & similar questions filled HP2-I68 Exam Book with the market and you may get confused about which is the most helpful one for you.

NEW QUESTION: 1 Which should be provided by corporate or programme management before the Starting up a Project process commences?
A. Sufficient information to identify the prospective Executive
B. The Project Initiation Documentation
C. Authority to initiate a project
D. A Project Brief
Answer: A

NEW QUESTION: 2 A company has a large set of keys defined in AWS KMS. Their developers frequently use the keys for the applications being developed. What is one of the ways that can be used to reduce the cost of accessing the keys in the AWS KMS service. Please select:
A. Use Data key caching
B. Create an alias of the key
C. Use the right key policy
D. Enable rotation of the keys
Answer: A
Explanation: Explanation The AWS Documentation mentions the following Data key caching stores data keys and related cryptographic material in a cache. When you encrypt or decrypt data, the AWS Encryption SDK looks for a matching data key in the cache. If it finds a match, it uses the cached data key rather than generating a new one. Data key caching can improve performance, reduce cost, and help you stay within service limits as your application scales. Option A, C and D are all incorrect since these options will not impact how the key is used. For more information on data key caching, please refer to below URL:
<https://docs.aws.amazon.com/encryption-sdk/latest/developer-guide/data-key-caching.html>
The correct answer is: Use Data key caching Submit your Feedback/Queries to our Experts

NEW QUESTION: 3 The company Security team requires that all data uploaded into an Amazon S3 bucket must be encrypted. The encryption keys must be highly available and the company must be able to control access on a per-user basis, with different users having access to different encryption keys. Which of the following architectures will meet these requirements? (Choose two.)
A. Use Amazon S3 server-side encryption with customer-managed keys, and use AWS CloudHSM to manage the keys. Use CloudHSM client software to control access to the keys that are generated.
B. Use Amazon S3 server-side encryption with customer-managed keys, and use two AWS CloudHSM instances configured in high-availability mode to manage the keys. Use IAM to control access to the keys that are generated in CloudHSM.
C. Use Amazon S3 server-side encryption with customer-managed keys, and use two AWS CloudHSM instances configured in high-availability mode to manage the keys. Use the Cloud HSM client software to control access to the keys that are generated.
D. Use Amazon S3 server-side encryption with Amazon S3-managed keys. Allow Amazon S3 to generate an AWS/S3 master key, and use IAM to control access to the data keys that are generated.
E. Use Amazon S3 server-side encryption with AWS KMS-managed keys, create multiple customer master keys, and use key policies to control access to them.
Answer: C, E
Explanation: Explanation
