NEW QUESTION: 1You need to recommend a solution for the memos. The solution must meet the compliance requirements.What should you include in the recommendation?**A.** Information Rights Management (IRM)**B.** Data loss prevention (DLP) policies**C.** Secure/Multipurpose Internet Mail Extensions (S/MIME)**D.** Domain Security**Answer: A****Explanation:**Explanation/Reference: Explanation:* Scenario: Management occasionally sends the staff internal memos that contain confidential information, such as sales figures. The memos must be protected so that unauthorized users cannot read the memos and internal users cannot forward the memos to external recipients.* With the IRM features in Exchange 2013, your organization and your users can control the rights recipients have for e-mail. IRM also helps allow or restrict recipient actions such as forwarding a message to other recipients, printing a message or attachment, or extracting message or attachment content by copying and pasting. IRM protection can be applied by users in Microsoft Outlook or Microsoft Office Outlook Web App, or it can be based on your organization's messaging policies and applied using transport protection rules or Outlook protection rules.Reference: Information Rights Management

NEW QUESTION: 2**A.** Option B**B.** Option C**C.** Option A**D.** Option D**Answer: D****Explanation:**ExplanationNAT: Local and Global Definitions http://www.cisco.com/en/US/tech/tk648/tk361/technologies_tech_note09186a0080094837.shtml Cisco defines these terms as:Inside local address-The IP address assigned to a host on the inside network. This is the address configured as a parameter of the computer OS or received via dynamic address allocation protocols such as DHCP. The address is likely not a legitimate IP address assigned by the Network Information Center (NIC) or service provider.Inside global address-A legitimate IP address assigned by the NIC or service provider that represents one or more inside local IP addresses to the outside world.Outside local address-The IP address of an outside host as it appears to the inside network. Not necessarily a legitimate address, it is allocated from an address space routable on the inside.Outside global address-The IP address assigned to a host on the outside network by the host owner.The address is allocated from a globally routable address or network space.These definitions still leave a lot to be interpreted.

For this example, this document redefines these terms by first defining local address and global address. Keep in mind that the terms inside and outside are NAT definitions. Interfaces on a NAT router are defined as inside or outside with the NAT configuration commands, ip nat inside destination and ip nat outside source . Networks to which these interfaces connect can then be thought of as inside networks or outside networks, respectively. Local address-A local address is any address that appears on the inside portion of the network. Global address-A global address is any address that appears on the outside portion of the network.
