NEW QUESTION: 3 Which two benefits do the command? ALTER DATABASE MOUNT CLONE DATABASE Offer for the tablespace point-in-time recovery? (Choose two) **A.** It allows you to remove a data file that has been added to the wrong tablespace. **B.** It allows the export to recover statistics on the tables. **C.** It allows the SYSTEM tablespace to become a transportable tablespace. **D.** It allows the POINT_IN_TIME_RECOVERY option on the export to function. **E.** It prevents accidental corruption of the primary database. **Answer: A, D** Explanation: This command allows the POINT_IN_TIME_RECOVERY option on the export to function and to remove a data file that has been added to the wrong tablespace. Oracle didn't advertise that in Oracle7 you could perform incomplete tablespace recovery, but you could. You can in Oracle8 and Oracle8i, as well. Say, for example, some data change was made a week ago in a table on one tablespace, and now it needs to be backed up. You don't want to back out of data changed in every tablespace, just this one. You can use incomplete recovery on a tablespace in order to revert to the version of data that existed just prior to the problem. For this task, you will need to create a second database on this or another machine, export the table on the second database, and import it back to the original. Creating this second database, sometimes referred to as a clone, is a main part of performing tablespace incomplete recovery. Incorrect Answers: A: It does not allow the export to recover statistics on the tables. B: Is used for different purposes, not to prevent accidental corruption of the primary database. C: It does not allow the SYSTEM tablespace to become a transportable tablespace. Oracle 8, DBA Certification Exam Guide, Jason S Couchman, p. 713-714 Chapter 15: Advanced Topics in Data Recovery
