Answer: A

NEW QUESTION: 2Which one of these statements is an example of how trust and identity management solutions should be deployed in the enterprise campus network?**A. Mixed ACL rules, using combinations of specific sources and destinations, should be applied as close to the source as possible.****B. Use the principle of top-down privilege, which means that each subject should have the privileges that are necessary to perform their defined tasks, as well as all the tasks for those roles below them.****C. For ease of management, practice defense in isolation - security mechanisms should be in place one time, in one place.****D. Authentication validation should be deployed as close to the data center as possible.****Answer: A**
Explanation:
Explanation/Reference:Explanation: Validating user authentication should be implemented as close to the source as possible, with an emphasis on strong authentication for access from

untrusted networks. Access rules should enforce policy deployed throughout the network with the following guidelines: An integral part of identity and access control deployments is to allow only the necessary access. Highly distributed rules allow for greater granularity and scalability but, unfortunately, increase the management complexity. On the other hand, centralized rule deployment eases management but lacks flexibility and scalability. Practicing "defense in depth" by using security mechanisms that back each other up is an important concept to understand. For example, the perimeter Internet routers should use ACLs to filter packets in addition to the firewall inspecting packets at a deeper level.
