NEW QUESTION: 1Your network contains an Active Directory domain named contoso.com. The domain contains two member servers named Server1 and Server2. All servers run Windows Server 2012 R2. Server1 and Server2 are nodes in a Hyper-V cluster named Cluster1. Cluster1 hosts 10 virtual machines. All of the virtual machines run Windows Server 2012 R2 and are members of the domain. You need to ensure that the first time a service named Service1 fails on a virtual machine, the virtual machine is moved to a different node. You configure Service1 to be monitored from Failover Cluster Manager. What should you configure on the virtual machine?
A. From the General settings, modify the Startup type.
B. From the Recovery settings of Service1, set the First failure recovery action to Restart the Service.
C. From the General settings, modify the Service status.
D. From the Recovery settings of Service1, set the First failure recovery action to Take No Action.
Answer: D
Explanation: Explanation/Reference: Explanation: When a monitored service fails the Recovery features of the service will take action. Example: In this case for the first failure the service will be restarted by the Service Control Manager inside the guest operating system, if the service fails for a second time the service will again be restarted via guest operating system. In case of a third failure the Service Control Manager will take no action and the Cluster service running on the Hyper-V host will take over recovery actions.

NEW QUESTION: 2 Reviewing which of the following would BEST ensure that security controls are effective?
A. Risk assessment policies
B. User access rights
C. Security metrics
D. Return on security investment
Answer: C
Explanation: Explanation/Reference: Explanation: Reviewing security metrics provides senior management a snapshot view and trends of an organization's security posture. Choice A is incorrect because reviewing risk assessment policies would not ensure that the controls are actually working. Choice B is incorrect because reviewing returns on security investments provides business justifications in implementing controls, but does not measure effectiveness of the control itself. Choice D is incorrect because reviewing user access rights is a joint responsibility of the data custodian and the data owner, and does not measure control effectiveness.

NEW QUESTION: 3 DRAG DROP You deploy an Active Directory forest that contains two domains named contoso.com and child.contoso.com. You plan to deploy Exchange Server 2013 servers to the child.contoso.com domain. You need to prepare Active Directory for the installation of the first Exchange Server 2013 servers. Which command should you run in each domain? (To answer, drag the appropriate commands to the correct domains. Each command may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)
Answer: Explanation:
