**NEW QUESTION: 1**Your network contains an Active Directory domain named contoso.com. The domain contains servers named Server1 and Server2 that run Windows Server 2012. Server1 has the IP Address Management (IPAM) Server feature installed. You install the IPAM client on Server2. You open Server Manager on Server2 as shown in the exhibit. (Click the Exhibit button.) You need to manage IPAM from Server2. What should you do first?  
**A.** On Server1, add the Server2 computer account to the IPAM ASM Administrators group.  
**B.** On Server2, open Computer Management and connect to Server1.  
**C.** On Server2, add Server1 to Server Manager.  
**D.** On Server1, add the Server2 computer account to the IPAM MSM Administrators group.

**Answer: C** Explanation: In the exhibit, we can see that only one server is managed with Server Manager on Server2 (itself, as in a Server, Server Manager always contains at least the server itself): So we can be sure that Server1 is not added to Server2 Server Manager Console. So if we want to manage IPAM, we should add Server1 to Server2's Server Manager

IPAM Users: Members of this group can view all information in server discovery, IP address space, and server management. They can view IPAM and DHCP server operational events, but cannot view IP address tracking information. IPAM MSM Administrators: IPAM multi-server management (MSM) administrators have IPAM Users privileges and can perform IPAM common management tasks and server management tasks. IPAM ASM Administrators: IPAM address space management (ASM) administrators have IPAM Users privileges and can perform IPAM common management tasks and IP address space tasks. (that's a user group, not a computer group) IPAM IP Audit Administrators: Members of this group have IPAM Users privileges and can perform IPAM common management tasks and can view IP address tracking information. Installation Process - IPAM Client Although the IPAM client feature is automatically installed on a Windows Server "8" Beta server, along with installation of the IPAM Server feature, this component can also be installed or uninstalled on its own. Click through the Add roles and features wizard screens to select Role or Feature Based Install and the target server. On the Select Features screen, select Remote Server Administration Tools -> Feature Administration Tools -> IP Address Management (IPAM) Client. Click Add Features when prompted. In order for the IPAM client to connect to an IPAM server, you must ensure that the target IPAM server is added to the Server Manager purview using the Add Servers wizard launched from the Manage menu. If both IPAM client and IPAM server are running on the same server, then by default the IPAMUI connects to the local IPAM server instance.
