Explanation: $(100-110)/(110+100) / (50-25)/(50+25) = -0.14$ Price elasticity equals the percentage change in quantity over the percentage change in price. These calculations are based on the arc elasticity formula. Using percentages calculated as $((100-110)/100)/(50-25)/50$, the elasticity would be -0.20 ($-10\%/50\%$). Again, the CFA exam questions have often used this latter approach.
