NEW QUESTION: 1You need to configure an iSCSI target device on your x86 based Oracle Solaris II system.While configuring the iSCSI device, the following error is displayed:`bash: stmfadm: command not found`Which option describes the solution to the problem?**A.** Install the storage-server group package on this system.**B.** The COMSTAR feature is not supported on the x86 platform. The feature is supported only on the SPARC platform.**C.** Use the `iscsitadm` command on the x86 platform when configuring an iSCSI target.**D.** Start the iSCSI target daemon on this system.**Answer: A****Explanation:**STMF - Manages transactions, such as context and resources for Small Computer System Interface (SCSI) command execution, and tracking logical unit and port providers. STMF also handles logical unit mappings, allocating memory, recovering failed operations, enumeration, and other necessary functions of an I/O stack.STMF is controlled by `stmfadm`, and `stmfadm` is the majority of the commands you will be using to administer COMSTAR (COMmon Multiprotocol Scsi TARget).Install the packages you need for COMSTAR with iSCSI and reboot:`# pfexec pkg install storage-server# pfexec pkg install SUNWiscsit# shutdown -y -i6 -g0`Note: You can set up and configure a COMSTAR Internet SCSI (iSCSI) target and make it available over the network. The iSCSI features can work over a normal Internet connection (such as Ethernet) using the standard iSCSI protocol. The iSCSI protocol also provides naming and discovery services, authentication services using CHAP and RADIUS, and centralized management through iSNS.The COMSTAR target mode framework runs as the `stmf` service. By default, the service is disabled. You must enable the service to use COMSTAR functionality. You can identify the service with the `svcs` command. If you have not rebooted the server since installing the group/feature/storage-server package, the service might not be enabled correctly.
