NEW QUESTION: 3An organization is using a centralized DHCP server for all IP phones. However, when the IP phones are powered up, the phones are unable to obtain an IP address. Which CLI command should be in the router configuration to ensure that the IP phones are able to reach the DHCP server?
A. router(config)# ip helper-address
B. router(config-if)# helper-address
C. router(config)# helper-address
D. router(config-if)# ip helper-address
Answer: D
Explanation:Configuring IP Helper Addresses
To configure the helper address, identify the router interface that will receive the broadcasts for UDP services. In interface configuration mode, use the ip helper-address command to define the address to which UDP broadcasts for

services should be forwarded. By default, the ip helper-address command forwards the eight UDP services listed. What if Company XYZ needs to forward requests for a service not on this list? The Cisco IOS software provides the global configuration command ip forward-protocol to allow an administrator to forward any UDP port in addition to the default eight. To forward UDP on port 517, use the global configuration command ip forward-protocol udp 517. This command is used not only to add a UDP port to the default eight, but also to subtract an unwanted service from the default group. When forwarding DHCP, TFTP, and DNS without forwarding Time, TACACS, and NetBIOS, the Cisco IOS software requires that the router be configured according to the syntax shown in Example 2-5.

Example 2-5 Forwarding UDP Services

```
RTA(config-if)#ip helper-address 192.168.1.254
RTA(config-if)#exit
RTA(config)#ip forward-protocol udp 517
RTA(config)#no ip forward-protocol udp 37
RTA(config)#no ip forward-protocol udp 49
RTA(config)#no ip forward-protocol udp 137
RTA(config)#no ip forward-protocol udp 138
```
