order. Which three actions you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. **Answer:**  
Explanation: Explanation Step 1: Create an external data source and set the First\_Row option. Creates an External File Format object defining external data stored in Hadoop, Azure Blob Storage, or Azure Data Lake Store. Creating an external file format is a prerequisite for creating an External Table. FIRST\_ROW = First\_row\_int Specifies the row number that is read first in all files during a PolyBase load. This parameter can take values 1-15. If the value is set to two, the first row in every file (header row) is skipped when the data is loaded. Rows are skipped based on the existence of row terminators (/r/n, /r, /n). Step 2: Create an external data source that uses the abfs location The hadoop-azure module provides support for the Azure Data Lake Storage Gen2 storage layer through the "abfs" connector Step 3: Use CREATE EXTERNAL TABLE AS SELECT (CETAS) and create a view that removes the empty row.
