We can help you pass exam surely, [ARC-801 Brain Dumps](#) It support any electronics, iPhone, Android or Windows.

NEW QUESTION: 1You are designing a cloudformation stack which involves the creation of a web server and a database server.You need to ensure that the web server in the stack gets created after the database server is created. How can you achieve this?**A.** Ensure that the database server is defined as a child of the web server in the cloudformation template.**B.** Ensure that the database server is defined first and before the web server in the cloudformation template.The stack creation normally goes in order to create the resources.**C.** Ensure that the web server is defined as a child of the database server in the cloudformation template.**D.** Use the DependsOn attribute to ensure that the database server is created before the web server.**Answer: D**Explanation:ExplanationThe AWS Documentation mentionsWith the DependsOn attribute you can specify that the creation of a specific resource follows another. When you add a DependsOn attribute to a resource, that resource is created only after the creation of the resource specified in the DependsOn attribute.For more information on the DependsOn attribute, please visit the below url
<http://docs.aws.amazon.com/AWSCloudFormation/latest/UserGuide/aws-attribute-dependson.html>

NEW QUESTION: 2You are working as a solution architect with a global automotive provider who is looking to create a multi-cloud solution. They want to run their application tier in Microsoft Azure while utilizing the Oracle DB Systems in the Oracle Cloud Infrastructure (OCI). What is the most-fault tolerant and secure solution for this customer? (Choose the best answer.)**A.** Create an encrypted, Virtual Private Network connection between the Microsoft Azure Virtual Network that contains the application tier and the OCI Virtual Cloud Network (VCN) that contains the Oracle Databases.**B.** Use an OCI Virtual Cloud Network remote peering connection to create a remote network connection between the application tier running in Microsoft Azure Virtual Network and Oracle Databases running in the OCI Virtual Cloud Network (VCN).**C.** Create a FastConnect virtual circuit with Microsoft Azure as the provider to establish a private interconnect between the application tier running in the Azure Virtual Network and the OCI VCN that contains the Oracle Databases.**D.** Deploy the Oracle database system into a public subnet in your VCN and assign a public IP address. Connect your application tier running in Azure to the public IP address of the database system over the internet.**Answer: C**Explanation:
<https://docs.oracle.com/en/solutions/learn-azure-oci-interconnect/index.html#GUID-FBE38C70-A4CF-40C5-A37A-121241D21199>

NEW QUESTION: 3A Four-way TCP Hand Shake is to_____.**A.** Close the TCP connection**B.** Correct the TCP connection**C.** Connect TCP connection**D.** Close the UDP connection**Answer: A**

NEW QUESTION: 4You run the wc -c file1.txt command. If this command displays any error message, you want to store the error message in the error.txt file.Which of the following

commands will you use to accomplish the task?**Answer:** Explanation:A is incorrect.The >> operator will redirect the output of the command in the same manner as the > or |> operator. Although the >>operator will not overwrite the error.txt file, it will append the error.txt file.
