**NEW QUESTION: 1** DRAG DROP You are the desktop administrator for a small company. Your workgroup environment consists of Windows 10 Enterprise computers. You want to prevent 10 help desk computers from sleeping. However, you want the screens to shut off after a certain period of time if the computers are not being used. You need to configure and apply a standard power configuration scheme for the 10 help desk computers on your network. Which four Actions should you perform in sequence? Select and Place: **Answer:** Explanation: Explanation/Reference: Explanation: You can use the Powercfg.exe tool to control power settings and configure computers to default to Hibernate or Standby modes. In this question, we use POWERCFG /X on one help desk computer to modify the power scheme to meet our requirements. After configuring the required settings, we can export the power scheme settings to a file by using POWERCFG /EXPORT. We can then import the power scheme from the file on each of the remaining help desk computers by using POWERCFG /IMPORT. After importing the power scheme on the remaining computers, we need to set the new power scheme to be the active power scheme by using POWERCFG /S.
