We provide one year free updates for every buyer, after purchasing you can download our latest version of PMP training questions always within one year.

NEW QUESTION: 1A. Option EB. Option AC. Option FD. Option DE. Option CF. Option B

Answer: E

NEW QUESTION: 2You have a multi-class image classification deep learning model that uses a set of labeled photographs. You create the following code to select hyperparameter values when training the model. For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point. **Answer:**

Explanation: Explanation Box 1: Yes Hyperparameters are adjustable parameters you choose to train a model that govern the training process itself. Azure Machine Learning allows you to automate hyperparameter exploration in an efficient manner, saving you significant time and resources. You specify the range of hyperparameter values and a maximum number of training runs. The system then automatically launches multiple simultaneous runs with different parameter configurations and finds the configuration that results in the best performance, measured by the metric you choose. Poorly performing training runs are automatically early terminated, reducing wastage of compute resources. These resources are instead used to explore other hyperparameter configurations. Box 2: Yes uniform(low, high) - Returns a value uniformly distributed between low and high Box 3: No Bayesian sampling does not currently support any early termination policy. Reference:

NEW QUESTION: 3A company wants to leverage Veeam DataLabs to automate the creation of a test environment. As testing one large, multi-VM application could require more than a single host, a dedicated VMware ESXi cluster has been identified. The sandbox is to be refreshed weekly or on demand. Select the benefits of using replication jobs in this environment. (Choose two.) **A.** Replication jobs do not stop the sandbox, unlike backup jobs **B.** The VMs are running directly on a high performance datastore, uncompressed **C.** There is a bigger number of VMs supported for multi-VM application tests when replicas are used **D.** There are additional tests available in DataLabs when replicas are the source **E.** Replicas can take advantage of advanced multi-host virtual labs **Answer: B, E** Explanation: Explanation
