NEW QUESTION: 1What reasons would prevent an administrator from deploying a virtual machine from a template? (Choose two.)**A.** The vSphere Client is connected to an ESXi host.**B.** The template is listed as Orphaned.**C.** The administrator is using the vSphere Web Client.**D.** The template is missing the .vmx configuration file.**Answer: A,B**

NEW QUESTION: 2Your application uses Cloud Formation to orchestrate your application's resources. During your testing phase before the application went live, your Amazon RDS instance type was changed and caused the instance to be re-created, resulting In the loss of test data. How should you prevent this from occurring in the future?**A.** In the AWS CloudFormation template, set the AWS::RDS::DBInstance's DBInstanceClass property to be read-only.**B.** Use an AWS CloudFormation stack policy to deny updates to the instance. Only allow UpdateStack permission to IAM principals that are denied SetStackPolicy.**C.** Within the AWS CloudFormation parameter with which users can select the Amazon RDS instance type, set AllowedValues to only contain the current instance type.**D.** Subscribe to the AWS CloudFormation notification "BeforeResourceUpdate," and call CancelStackUpdate if the resource identified is the Amazon RDS instance.**E.** Update the stack using ChangeSets**Answer: E****Explanation:**ExplanationWhen you need to update a stack, understanding how your changes will affect running resources before you implement them can help you update stacks with confidence. Change sets allow you to preview how proposed changes to a stack might impact your running resources, for example, whether your changes will delete or replace any critical resources, AWS CloudFormation makes the changes to your stack only when you decide to execute the change set, allowing you to decide whether to proceed with your proposed changes or explore other changes by creating another change set For example, you can use a change set to verify that AWS CloudFormation won't replace your stack's database instances during an update.
