NEW QUESTION: 1You are a Database Administrator for MySQL database. Users are complaining of slow query execution in a few tables. You need to ensure that contents of those tables are accessed more efficiently. You are sure that the table structure and its contents have no problems. Which of the following steps will you take to accomplish the task?Each correct answer represents a part of the solution. Choose two.**A.** Perform a table check operation.**B.** Perform a table analysis operation.**C.** Perform a table repair operation.**D.** Perform a table optimization operation.**Answer: B,D**Explanation:In order to ensure that the contents in a table are accessed more efficiently, perform table analysis and table optimization operations. A table analysis updates statistics of distribution of index key values. It helps the optimizer to generate better execution plans for queries on the table. A table optimization reorganizes a table so that its contents are accessed more efficiently. These operations can be performed for the MyISAM and InnoDB tables.**Answer D and B are incorrect.** Table check and table repair is used for integrity checking and repairing respectively. It ensures that the table's structure and contents have no problem.

NEW QUESTION: 2R1 router clock is synchronized with ISP router. R2 is supposed to receive NTP updates from R1. But you observe that R2 clock is not synchronized with R1. What is the reason R2 is not receiving NTP updates from R1?**A.** The IP address that is used in the NTP configuration on R2 router is incorrect.**B.** R2 router Ethernet interface that is connected to R1 is placed in shutdown condition.**C.** R1 router Ethernet interface that is connected to R2 is placed in shutdown condition.**D.** The NTP server command not configured on R2 router.**Answer: A**Explanation:Explanation/Reference:Explanation:First we should verify if the ports connected between R1 and R2 is in "up/up" state with the "show ip interface brief" command on R1 & R2. Note: We learn R1 & R2 connect to each other via E0/2 interface because the IP addresses of these interfaces belong to 192.168.10.0/30 subnet. Both of them are "up/up" so the link connecting between R1& R2 is good.Next we need to verify the ntp configuration on R2 with the "show running-config" command:So there is only one command related to NTP configuration on R2 so we need to check if the IP address of192.168.100.1 is correct or not. But from the "show ip interface brief" command on R1 we don't see this IP-> This IP address is not correct. It should be 192.168.10.1 (IP address of interface E0/2 of R1), not192.168.100.1.

NEW QUESTION: 3You are attempting to install a switch remotely You have a POAP script that fails to find a specified boot image on the switch. Which action do you take?**A.** Adjust the script

to use any image on the switch
B. Reboot the switch
C. Abort the provisioning process
D. Download a copy of the image used by the script
Answer: C
