NEW QUESTION: 2 A customer has enabled LTPA as their authentication mechanism and has web resources that are not secured by proper security constraints. A system administrator is required to ensure that all web resources are secured. How should the administrator accomplish this? **A.** Enable "Authenticate only when the URI is protected". **B.** Enable "Use available authentication data when an unprotected URI is accessed". **C.** Map the application security roles to the configured user registry's groups. **D.** Enable "Authenticate when any URI is accessed". **E.** Enable "Authenticate only when the URI is protected". **Disable "Use available authentication data when an unprotected URI is accessed".** **Answer: C** **Explanation:** Explanation/Reference: Explanation: Authenticate only when the URI is protected The application server challenges the web client to provide authentication data when the web client accesses a Uniform Resource Identifier (URI) that is protected by a Java Platform, Enterprise Edition (Java EE) role. The authenticated identity is available only when the web client accesses a protected URI. This option is the default Java EE web authentication behavior that is also available in previous releases of WebSphere® Application Server.
