In this scenario what is the problem? **A.** You need to have the customer check the cable. **B.** You need to add a static gateway to the LIFs routing group. **C.** You need to have the DNS server on the same subnet as the LIF IP address. **D.** You need to add an IPspace and domain broadcast to the port. **Answer: D**

All the PE routers have a similar configuration, and BGP peering and extended-community meshing are configured correctly. Which configuration change routes the traffic through R1? A) B) C) D) **A. **NEW QUESTION: 4** You need to recommend a solution for DHCP logging. The solution must meet the technical requirement. What should you include in the recommendation? **A. IP Address Management (IPAM) B. Event subscriptions C. DHCP audit logging D. DHCP filtering**  
**Answer: A**  
Explanation: \* Scenario: A central log of the IP address leases and the users associated to those leases must be created. \* Feature description IPAM in Windows Server 2012 is a new built-in framework for discovering, monitoring, auditing, and managing the IP address space used on a corporate network. IPAM provides for administration and monitoring of servers running Dynamic Host Configuration Protocol (DHCP) and Domain Name Service (DNS). IPAM includes components for: Automatic IP address infrastructure discovery: IPAM discovers domain controllers, DHCP servers, and DNS servers in the domains you choose. You can enable or disable management of these servers by IPAM. Custom IP address space display, reporting, and management: The display of IP addresses is highly customizable and detailed tracking and utilization data is available. IPv4 and IPv6 address space is organized into IP address blocks, IP address ranges, and individual IP addresses. IP addresses are assigned built-in or user-defined fields that can be used to further organize IP address space into hierarchical, logical groups. Audit of server configuration changes and tracking of IP address usage: Operational events are displayed for the IPAM server and managed DHCP servers. IPAM also enables IP address tracking using DHCP lease events and user logon events collected from Network Policy Server (NPS), domain controllers, and DHCP servers. Tracking is available by IP address, client ID, host name, or user name. Monitoring and management of DHCP and DNS services: IPAM enables automated service availability monitoring for Microsoft DHCP and DNS servers across the forest. DNS zone health is displayed, and detailed DHCP server and scope management is available using the IPAM console. Reference: IP Address Management (IPAM) Overview You are evaluating the implementation of data deduplication on the planned Windows Server 2012 file servers.
