scheduled at the same priority as user IO./ IORM does not intervene if there is only one active consumer group on one database./ Any disk allocation that is not fully utilized is made available to other workloads in relation to the configured resource plans./ Background IO is scheduled based on their priority relative to user IO./ For each cell disk, each database accessing the cell has one IO queue per consumer group and three background queues Note: \*Use IORM metrics to track / I/O load per Consumer Group (IOPS, MBPS, disk utilization %) / I/O throttling per Consumer Group Reference: Using IORM with Exadata
