NEW QUESTION: 3Which of the following would provide the STRONGEST encryption?**A. Random one-time padB. DES with a 56-bit keyC. RSA with a 1024-bit keyD. AES with a 256-bit keyAnswer: A**Explanation:One-time pads are the only truly completely secure cryptographic implementations.They are so secure for two reasons. First, they use a key that is as long as a plaintext message. That means there is no pattern in the key application for an attacker to use. Also, one-time pad keys are used only once and then discarded.So even if you could break a one-time pad cipher, that same key would never be used again, so knowledge of the key would be useless.Incorrect Answers:B, C, D: DES; AES, and RSA are less secure than one-time pads.
