NEW QUESTION: 1DRAG DROPYou have a Windows Assessment and Deployment Kit (Windows ADK) environment that contains a file server named Server1. Server1 runs Windows Server 2012 R2.You copy the Windows 10 installation media to a shared folder on Server1. You install Windows 10 on a reference computer, and then you generalize the installation.You need to replace the image in the share with an image of the reference computer.Which three actions should you perform in sequence? (To answer, move the appropriate three actions from the list of actions to the answer and arrange them in the correct order.)**Answer:** Explanation:

NEW QUESTION: 2Your network contains an Active Directory domain named contoso.com. The domain contains three member servers named Server1, Server2, and Server3. All servers run Windows Server 2012 and have the Windows Server Update Services (WSUS) server role installed.Server1 and Server2 are configured as replica servers that use Server3 as an upstream server. You remove Server3 from the network.You need to ensure that WSUS on Server2 retrieves updates from Server1.The solution must ensure that Server1 and Server2 have the latest updates from Microsoft.Which command should you run on each server? To answer, select the appropriate command to run on each server in the answer area.**Answer:** Explanation:

NEW QUESTION: 3NO: 81A company is about to release a very large patch to its customers. An administrator is required to test patch installations several times prior to distributing them to customer PCs.Which of the following should the administrator use to test the patching process quickly and often?**A.** Create an incremental backup of an unpatched PC**B.** Create an image of a patched PC and replicate it to servers**C.** Create a full disk image to restore after each installation**D.** Create a virtualized sandbox and utilize snapshots**Answer: D**Explanation:

Sandboxing is the process of isolating a system before installing new applications or patches on it so as to restrict the software from being able to cause harm to production systems. Before the patch is installed, a snapshot of the system should be taken. Snapshots are backups that can be used to quickly recover from poor updates, and errors arising from newly installed applications.
