**Explanation:** In VRF-Lite, Route distinguisher (RD) identifies the customer routing table and allows customers to be assigned overlapping addresses. Therefore it can support multiple customers with overlapping addresses -> Answer 'It can support multiple customers on a single switch' is correct. VRFs are commonly used for MPLS deployments, when we use VRFs without MPLS then we call it VRF lite -> Answer 'It supports MPLS-VRF label exchange and labeled packets' is not correct. **NEW QUESTION: 4** A financial services company logs personally identifiable information to its application logs stored in Amazon S3. Due to regulatory compliance requirements, the log files must be encrypted at rest. The Security team has mandated that the company's on-premises hardware security modules (HSMs) be used to generate the CMK material. Which steps should the Solution Architect take to meet these requirements?  
**A.** Create an AWS CloudHSM cluster. Create a new CMK in AWS KMS using AWS\_CloudHSM as the source for the key material and an origin of AWS-CLOUDHSM. Enable automatic key rotation on the CMK with a duration of 1 year. Configure a bucket policy on the logging bucket that disallows uploads of unencrypted data and requires that the encryption source be AWS KMS.  
**B.** Create a CMK in AWS KMS with no key material and an origin of EXTERNAL. Import the key material generated from the on-premises HSMs into the CMK using the public key and import token provided by AWS. Configure a bucket policy on the logging bucket that disallows uploads of non-encrypted data and requires that the encryption source be AWS KMS.  
**C.** Provision an AWS Direct Connect connection, ensuring there is no overlap of the RFC 1918 address space between on-premises hardware and the VPC. Configure an AWS bucket policy on the logging bucket that requires all objects to be key material, and create a unique CMK for each logging event.  
**D.** Create a new CMK in AWS KMS with AWS-provided key material and an origin of AWS-KMS. Disable this CMK, and overwrite the key material with the material from the on-premises HSM using the public key and import token provided by AWS. Re-enable the CMK. Enable automatic key rotation on the CMK with a duration of 1 year. Configure a bucket policy on the logging bucket that disallows uploads of non-encrypted data and requires that the encryption source be AWS KMS.  
**Answer: B**
