but today our 2V0-21.23 questions & answers will work out all you problems and get rid of all your worries with its highest quality and fastest ways to guide you to the path of high efficiency.

With a total new perspective 2V0-21.23 guide torrent materials: VMware vSphere 8.x Professional have been compiled to serve most the office workers who aim at getting a qualification certification.

**NEW QUESTION: 1** You have the Windows Assessment and Deployment Kit (Windows ADK) installed. You have a Windows Preinstallation Environment (Windows PE) image. You copy a custom startup script to the image. You need to ensure that the script runs each time the image starts. Which two possible files can you modify to achieve this goal? (Each correct answer presents a complete solution. Choose two.)  
**A.** Unattend.xml  
**B.** Winbom.ini  
**C.** Winpeshl.ini  
**D.** Startnet.cmd  
**E.** Copyype.cmd  
**Answer: C, D**  
**Explanation:** Explanation/Reference: C: Add a Customized Script with Winpeshl.ini You can launch a customized shell application by using a file called Winpeshl.ini. Winpeshl.exe will process the settings in Winpeshl.ini during boot. If you create a customized Winpeshl.ini and require Plug and Play or network support, you must include a call to Wipeinit.exe. Wpeinit.exe specifically installs Plug and Play devices, processes Unattend.xml settings, and loads network resources. E: Add a Customized Script with Startnet.cmd You can add customized command-line scripts in Windows PE by using Startnet.cmd. By default, Windows PE includes a Startnet.cmd script located at %SYSTEMROOT%\System32 of your customized Windows PE image. Startnet.cmd currently starts Wpeinit.exe. Wpeinit.exe specifically installs Plug and Play devices, processes Unattend.xml settings, and loads network resources\* third way: Add Customizations with Unattend.xml You can use an answer file with Windows PE to specify various settings and actions. When Windows PE starts, it implicitly looks for a file called Unattend.xml at the root of any bootable device (for example, a USB flash drive or a floppy disk). You can also specify an Unattend.xml file by using Startnet.cmd and Wpeinit.exe. Note: The following procedure demonstrates how to add a customized script to a Windows PE image offline. Windows PE provides three methods for launching custom scripts: Winpeshl.ini, Startnet.cmd, and Unattend.xml. The Windows PE default interface is a Command Prompt window. However, you can create a customized Winpeshl.ini file to run your own shell application. You can also create your own version of Startnet.cmd to run a specific set of commands, batch files, or scripts.

Unattend.xml is a new answer file format for Windows PE 2.0, which replaces Winbom.ini and Winpeoem.sif. Reference: Include a Custom Script in a Windows PE Image

**NEW QUESTION: 2** Given the following output: Which Explain procedure can be used to find the most expensive SQL statement in terms of CPU cost over a period of time? **A.** EXPLAIN\_FROM\_DATAB. **B.** EXPLAIN\_FROM\_ACTIVITY **C.** EXPLAIN\_FROM\_SECTION **D.** EXPLAIN\_FROM\_CATALOG **Answer: B**

**NEW QUESTION: 3** Based on the information shown in the exhibit, when the SGW sends a "Create Session Request" message to the PGW, which of the following is the source IP address expected in the IP packet? **A.** 20.20.0.1 **B.** None of the above answers are correct **C.** 10.10.2.1 **D.** 72.22.24.163 **E.** 10.10.7.1 **Answer: E**
