**NEW QUESTION: 2** Which of the following is not a characteristic of the Project Life Cycle?  
**A.** Ability of the stakeholders to influence final characteristics of the projects product increases as the project continues.  
**B.** Risk and uncertainty is highest at start of the project.  
**C.** Cost and staffing levels are low at the start, higher towards the end and drop rapidly as the project draws to a conclusion.  
**D.** The project life cycle definition determines which transitional actions at the beginning and end of the project are included - so, the project life cycle definition can be a link to the ongoing operations of the performing organization.  
**Answer: A**

**NEW QUESTION: 3** An organization is setting up their website on AWS. The organization is working on various security measures to be performed on the AWS EC2 instances. Which of the below mentioned security mechanisms will not help the organization to avoid future data leaks and identify security weaknesses?  
**A.** Run penetration testing on AWS with prior approval from Amazon.  
**B.** Perform a Code Check for any memory leaks.  
**C.** Perform a hardening test on the AWS instance.  
**D.** Perform SQL injection for application testing.  
**Answer: B**  
**Explanation:** AWS security follows the shared security model where the user is as much responsible as Amazon. Since Amazon is a public cloud it is bound to be targeted by hackers. If an organization is planning to host their application on AWS EC2, they should perform the below mentioned security checks as a measure to find any security weakness/data leaks:  
Perform penetration testing as performed by attackers to find any vulnerability. The organization must take an approval from AWS before performing penetration testing  
Perform hardening testing to find if there are any unnecessary ports open  
Perform SQL injection to find any DB security issues  
The code memory checks are generally useful when the organization wants to improve the application performance.
