It encourages us to focus more on the quality and usefulness of our Health-Cloud-Accredited-Professional exam questions in the future, So once we apply for the Health-Cloud-Accredited-Professional exam we would like to pass exam just once.

Some people may be used on reading on phones and ipads.

NEW QUESTION: 1 DRAG DROP Your company has an Office 365 subscription and uses Microsoft Exchange Online. Some employees have archive mailboxes that have the default retention policy applied. The default retention policy does not meet the latest company requirements. You create a retention policy named RetentionPolicy1 and apply the necessary retention tags to the policy. You need to apply the new retention policy to all archive mailboxes and ensure that the new retention policy tags are applied as soon as possible. Which three Windows PowerShell commands should you run in sequence? To answer, move the appropriate commands from the list of commands to the answer area and arrange them in the correct order. Select and Place: **Answer:** Explanation: Explanation/Reference: Explanation: Retention Policy Tags are used to apply retention settings to folders and individual items such as e-mail messages. These settings specify how long a message remains in a mailbox and the action to be taken when the message reaches the specified retention age. A Retention Policy is a group of retention tags that can be applied to a mailbox. Box 1: The Get-Mailbox cmdlet retrieves a list of mailboxes. The -Filter {(ArchiveStatus -eq 'Active')} statement filters the list of retrieved mailboxes to list only the mailboxes that have Archiving enabled and active. Box 2: The Set-Mailbox cmdlet is used to assign the retention policy to the mailboxes retrieved in step 1. Box 3: The Start-ManagedFolderAssistant cmdlet is used to immediately start messaging records management (MRM) processing of mailboxes. This will immediately apply the new retention policy. NEW QUESTION: 2 TCP /

IPモデルのインターネット層は、どの2つのプロトコルをカプセル化しますか？

(2つ選択してください。) **A. TCP B. DNS C. SMTP D. ARP E. ICMP** **Answer: B, C**

NEW QUESTION: 3 A. Option CB. Option DC. Option BD. Option A **Answer: C**

NEW QUESTION: 4A lead software engineer tells you that his new application design uses websockets and HTTP sessions that are not distributed across the web servers. You want to help him ensure his application will run properly on Google Cloud Platform. What should you do?**A.** Meet with the cloud operations team and the engineer to discuss load balancer options.**B.** Help the engineer to convert his websocket code to use HTTP streaming.**C.** Help the engineer redesign the application to use a distributed user session service that does not rely on websockets and HTTP sessions.**D.** Review the encryption requirements for websocket connections with the security team.**Answer: A**
Explanation:Google Cloud Platform (GCP) HTTP(S) load balancing provides global load balancing for HTTP(S) requests destined for your instances.The HTTP(S) load balancer has native support for the WebSocket protocol.
Incorrect Answers:A: HTTP server push, also known as HTTP streaming, is a client-server communication pattern that sends information from an HTTP server to a client asynchronously, without a client request. A server push architecture is especially effective for highly interactive web or mobile applications, where one or more clients need to receive continuous information from the server.
