NEW QUESTION: 1A. Option DB. Option EC. Option BD. Option AE. Option C Answer: A,B

NEW QUESTION: 2A company is launching an application that it expects to be very popular. The company needs a database that can scale with the rest of the application. The schema will change frequently. The application cannot afford any downtime for database changes. Which AWS service allows the company to achieve these objectives?**A. Amazon DynamoDB B. Amazon Redshift C. Amazon Aurora D. Amazon RDS MySQL Answer: A** Explanation: DynamoDB a NoSQL DB which means you can change the schema easily. It's also the only DB in the list that you can scale without any downtime Amazon Aurora, RDS MySQL and RedShift all require changing instance sizes in order to scale which causes an outage. They are also all relational databases (SQL) so changing the schema is difficult. References: <https://digitalcloud.training/certification-training/aws-solutions-architect-associate/database/amazon-dynamodb/>

NEW QUESTION: 3A customer currently has blades of several types, including Intel-based blades, and is using virtualization. Without having more details of the customer current environment what could be presented as an advantage of the Unified Resource Manager and Without having more details of the customer? current environment what could be presented as an advantage of the Unified Resource Manager and zBX?**A.
