**NEW QUESTION: 1** A technician is configuring the IP networking portion on a server installation. Which of the following types of IP addresses would be BEST to use for this server?  
**A.** Dynamic **B.** Reserved **C.** Static **D.** APIPA **Answer: C**

**NEW QUESTION: 2** Hotspot Question Refer to the topology. Your company has connected the routers R1, R2, and R3 with serial links. R2 and R3 are connected to the switches SW1 and SW2, respectively. SW1 and SW2 are also connected to the routers R4 and R5. The EIGRP routing protocol is configured. You are required to troubleshoot and resolve the EIGRP issues between the various routers. Use the appropriate show commands to troubleshoot the issues. Router R6 does not form an EIGRP neighbor relationship correctly with router R1. What is the cause for this misconfiguration?  
**A.** The AS does not match. **B.** The passive-interface command is enabled. **C.** The K values mismatch. **D.** The network command is missing. **Answer: C**  
**Explanation:** Use the command "show run" we can see the K value is 000111 on R6. Then you should check if R1 has the same "metric weights" or not. The K value is default 010100 on R1. For your information, EIGRP K values are the scale numbers that EIGRP uses in metric calculation. Mismatched K values can prevent neighbor relationships from being established. The syntax of "metric

weights" command is:metric weights tos k1 k2 k3 k4 k5 (with tos is the type of service and must always be zero)

**NEW QUESTION: 3** I have a portfolio of two stocks. The weights are 60% and 40% respectively, the volatilities are both 20%, while the correlation of returns is 50%. The volatility of my portfolio is **A. 24.4% B. 20% C. 17.4% D. 16%** **Answer: C**
