We started out by launching the EBS Snapshot Copy feature late last year. This feature gave you the ability to copy a snapshot from Region to Region with just a couple of clicks. In addition, last month we made a significant reduction (26% to 83%) in the cost of transferring data between AWS Regions, making it less expensive to operate in more than one AWS region. Today we are introducing a new feature: Amazon Machine Image (AMI) Copy. AMI Copy enables you to easily copy your Amazon Machine Images between AWS Regions. AMI Copy helps enable several key scenarios including: Simple and Consistent Multi-Region Deployment - You can copy an AMI from one region to another, enabling you to easily launch consistent instances based on the same AMI into different regions. Scalability - You can more easily design and build world-scale applications that meet the needs of your users, regardless of their location. Performance - You can increase performance by distributing your application and locating critical components of your application in closer proximity to your users. You can also take advantage of region-specific features such as instance types or

other AWS services. Even Higher Availability - You can design and deploy applications across AWS regions, to increase availability. Once the new AMI is in an Available state the copy is complete. <https://aws.amazon.com/blogs/aws/ec2-ami-copy-between-regions/>
