So choosing right study materials **Pass4sure ESG-Investing Pass Guide** is very necessary and important in the Certificate in ESG Investing valid test.

**NEW QUESTION: 1** You are a professional level SQL Server 2005 database administrator in an international corporation named Wiikigo. You are experienced in implementing high-availability solutions, monitoring the database server, and design deployment. In the company, your major job is the deployment, maintenance and support of Microsoft SQL Server 2005. You work as the database administrator for your company. You administer a SQL Server 2005 computer which contains a database named DB01. A table named CustInfo is included in DB01. The table includes an identity column named CustID and an nvarchar column named CustName. According to the requirement of the company policy, rows containing duplicate CustName values should be removed from the CustInfo table once each year. But only when rows have been manually examined and verified as being duplicates, they can be removed from the CustInfo table. Since you are the technical support, the company asks you to provide a way to identify potential duplicate rows for manual examination. You should use as little administrative effort as possible when you try to achieve this. So what action should you perform?  
**A.** Create a trigger for the CustInfo table that rolls back INSERT queries that contain duplicate data.  
**B.** You should create a new table that contains duplicate rows from the CustInfo table by using a SELECT INTO query that includes GROUP BY and HAVING clauses.  
**C.** On the CustName column, a new unique index should be created. When the index is being created, Specify

IGNORE\_DUP\_KEY = ON.**D.** A foreign key constraint should be created on the CustName column. This constraint references a distinct list of CustName values.**Answer: B**

**NEW QUESTION: 2**You need to define a modeling strategy for ad response.Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.**Answer:** Explanation:

ExplanationStep 1: Implement a K-Means Clustering modelStep 2: Use the cluster as a feature in a Decision jungle model.Decision jungles are non-parametric models, which can represent non-linear decision boundaries.Step 3: Use the raw score as a feature in a Score Matchbox Recommender model The goal of creating a recommendation system is to recommend one or more "items" to "users" of the system.Examples of an item could be a movie, restaurant, book, or song. A user could be a person, group of persons, or other entity with item preferences.

Scenario:Ad response rated declined.Ad response models must be trained at the beginning of each event and applied during the sporting event.Market segmentation models must optimize for similar ad response history.Ad response models must support non-linear boundaries of features.References:
