NEW QUESTION: 2Identify three features of shared entities in Oracle E-Business Suite Release 12. (Choose three.)**A.** Are owned by a single Oracle Application module for table purposes only **B.** Are defined in each Oracle Application module separately**C.** Are owned by a single Oracle Application module to designate the primary user or decision maker**D.** Enable one-time definition of objects**E.** Are referenced by several Oracle Application modules**Answer: A,D,E**

NEW QUESTION: 3When BGP route reflectors are used, which attribute ensures that a routing loop is not created?**A.** weight**B.** multiexit discriminator**C.** local preference**D.** originator ID
Answer: DExplanation:As the iBGP learned routes are reflected, routing information may loop. The route reflector model has the following mechanisms to avoid routing loops:* Originator ID is an optional, nontransitive BGP attribute. It is a 4-byte attributed created by a route reflector. The attribute carries the router ID of the originator of the route in the local autonomous system. Therefore, if a misconfiguration causes routing information to come back to the originator, the information is ignored.* Cluster-list is an optional, nontransitive BGP attribute. It is a sequence of cluster IDs that the route has passed.When a route reflector reflects a route from its clients to nonclient peers, and vice versa, it appends the local clusterID to the cluster-list. If the cluster-list is empty, a new cluster-list is created. Using this attribute, a route reflector can identify if routing information is looped back to the same cluster due to misconfiguration. If the local cluster ID is found in the cluster-list, the advertisement is ignored. Reference:
