NEW QUESTION: 1Build List and Reorder:**Answer:** Explanation:Explanation:If we look at <http://technet.microsoft.com/en-us/library/hh872885.aspx> we see "The Read-Only Operator profile includes a set of privileges designed for users who need read-only access to alerts and views. A role based on the Read-Only Operators profile grants members the ability to view alerts and access views according to their configured scope."Hence a Read-Only operator will not be able to resolve any alert, only see that the alert is there.However the Operator role has the needed permissions.Why scope the user role?To create an Operator user role1.Log on to the computer with an account that is a member of the Operations Manager Administrators role for the Operations Manager 2007 Management Group.2.In the Operations Console, click the Administration button.3.In the Administration pane, expand Administration, expand Security, right-click User Roles, point to New User Role, and then click Operator.4.In the Create User Role Wizard displays, on the General page, type a name for the user role in the User role name text box, and then click Add.5.On the Select User or Groups dialog box, enter the users or groups that you want to assign to the Operator user role, and then click OK.6.On the General page, type an optional description in the Description text box for the Operator user role, and then click Next.7.On the Group Scope page, expand the list in the Groups list to individually select one or more object groups, and then click Next.8.On the Tasks page, you can configure the approved tasks that members of the Advanced Operator user role can run. If you want to configure a subset of available approved tasks, click Only tasks explicitly added to the Approved tasks grid are approved, click Add, click the desired tasks, and then click Next.9.On the Views page, you can configure the views that members of the Advanced Operators user role can see. If you want to configure a subset of available monitoring views for the Advanced Operator user role, click Only the views selected below are approved, click the desired approved views, and then click Next.10.On the Summary page, check the settings you have made, and then click Create.

NEW QUESTION: 2The WildFire Portal website supports which three operations? (Choose three.)**A.** upload files to WildFire for analysis**B.** view WildFire verdicts**C.** request firewall WildFire licenses**D.** report incorrect verdicts**Answer: A,B,D**

NEW QUESTION: 3You need to configure an access review. The review will be assigned to a new collection of reviews and reviewed by resource owners.Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the

answer area and arrange them in the correct order.**Answer:** Explanation:ExplanationStep 1: Create an access review programStep 2: Create an access review controlStep 3: Set Reviewers to Group ownersIn the Reviewers section, select either one or more people to review all the users in scope. Or you can select to have the members review their own access. If the resource is a group, you can ask the group owners to review.References:

NEW QUESTION: 4View the Exhibit.You have been asked to use CDP to document the network shown in the diagram above. You are working from HostA, which is connected to the console port of SwitchA. You connect to SwitchA and issue the show cdp neighbors and show cdp neighbors detail commands.Which of the following statements are correct? (Choose two.)**A.** The show cdp neighbors detail command will show all of the host IP addresses in use on HostA's LAN.**B.** The show cdp neighbors command will show which port on SwitchB connects to SwitchA.**C.** The show cdp neighbors detail command will display all of RouterA's IP addresses.**D.** The show cdp neighbors command will show two devices connected to SwitchA.**E.** The show cdp neighbors detail command will show information for all Cisco devices on the network.**Answer: B,D**Explanation:Explanation/Reference:Section: Design Methodologies ExplanationExplanation:The show cdp neighbors command will display the directly connected Cisco devices that are sending Cisco Discovery Protocol (CDP) updates; the directly connected devices in this case are RouterA and SwitchB. The port ID of the sending device will be displayed by the show cdp neighbors command.Therefore, the show cdp neighbors command will show which port on SwitchB and which interface on RouterA connect to SwitchA. CDP is used to collect information about neighboring Cisco devices and is enabled by default. Because CDP operates at the Data Link layer, which is Layer 2 of the Open Systems Interconnection (OSI) model, CDP is not dependent on any particular Layer 3 protocol addressing, such as IP addressing. Therefore, if CDP information is not being exchanged between devices, you should check for Physical layer and Data Link layer connectivity problems. CDP is enabled by default on Cisco devices.You can globally disable CDP by issuing the no cdp run command in global configuration mode. You can disable CDP on a perinterface basis by issuing the no cdp enable command in interface configuration mode.The show cdp neighbors detail command will not show information for all of the Cisco devices on the network. The only devices that will send CDP information are the directly connected devices.The show cdp neighbors detail command will not display all of RouterA's IP addresses. Updates sent from RouterA and received by SwitchA will include only the IP address of the port that sent the update.The show cdp neighbors detail command will not show all of the IP addresses of hosts on the LAN. Hosts do not send CDP information? only directly connected Cisco devices send CDP updates.Reference: CCDA 200-310 Official Cert Guide, Chapter 15, CDP, p. 629Cisco: Cisco IOS Configuration Fundamentals Command Reference, Release 12.2: show cdp neighbors
