NEW QUESTION: 1You are developing an application that uses structured exception handling. The application includes a class named ExceptionLogger. The ExceptionLogger class implements a method named LogException by using the following code segment:
`public static void LogException(Exception ex)`
You have the following requirements:
log all exceptions by using the LogException() method of the ExceptionLogger class.
rethrow the original exception, including the entire exception stack.
You need to meet the requirements. Which code segment should you use?
A. `catch{var ex = new Exception();throw ex;}`
B. `catch (Exception ex){ExceptionLogger.LogException(ex);throw ex;}`
C. `catch{ExceptionLogger.LogException(new Exception());throw;}`
D. `catch (Exception ex){ExceptionLogger.LogException(ex);throw;}`
Answer: D
Explanation:Once an exception is thrown, part of the information it carries is the stack trace. The stack trace is a list of the method call hierarchy that starts with the method that throws the exception and ends with the method that catches the exception. If an exception is re-thrown by specifying the exception in the throw statement, the stack trace is restarted at the current method and the list of method calls between the original method that threw the exception and the current method is lost. To keep the original stack trace information with the exception, use the throw statement without specifying the exception. NEW QUESTION: 2The Onboarding Planning Tool (OPT) lets administrators add keep-together rules to a batch. What function do the keep-together rules perform?
A. They require that if there are any batch members that have delegated access of their mail filesto other individuals (delegates), then the mailfiles of the those delegates must be included in the batch.
B. They automatically seed the batch with all users who are selected by the keep-together rules, reducing the work needed to populate themembers of the batch.
C. They add keep-together errors to users who have not yet been assigned to the batch, butshould be assigned to the batch. Thosekeep-together errors are not removed until the users have been assigned to the batch.
D. They let administrators inform OPT about the intended members of the batch. OPT adds akeep-together warning to the batch for everymember that is selected by a keep-together rule and that has not been included in the batch.
Answer: D
