(E)**A.** A standby router for failover operation**B.** A shadow router**C.** a CPE device that is managed by the network provider**D.** An offline router for disaster recovery**Answer: B**

NEW QUESTION: 3Which of the following is the control when observing network bandwidth patterns over time?**A.** Flow data**B.** Baseline**C.** Interface statistics**D.** Network log**Answer: B**
Explanation:To successfully baseline a network it is important to consider two functions; performance at protocol level and performance at application level. There are many significant metrics to consider at the protocol level, but only a few which are critical. The most important is bandwidth utilization compared with bandwidth availability. The most likely cause of poor network performance is insufficient bandwidth. Trending bandwidth utilization allows you to recognize problem areas, provide enough bandwidth to reach performance objectives, and predict future capacity requirements. Changes in bandwidth utilization patterns also provide a clear indication of network usage alterations, such as a change in end-user behavior, or the unauthorized addition of an application.
