NEW QUESTION: 1Your company has three offices. The offices are located in Montreal, Toronto, and Vancouver. The network contains two Active Directory forests named contoso.com and adatum.com. The contoso.com forest contains one domain. The adatum.com forest contains two domains. All of the servers in adatum.com are located in the Toronto office. The servers in contoso.com are located in the Montreal and Vancouver offices. All of the servers in both of the forests run Windows Server 2012 R2. A two-way, forest trusts exists between the forests. Each office contains DHCP servers and DNS servers. You are designing an IP Address Management (IPAM) solution to manage the network. You need to recommend a solution for the placement of IPAM servers to manage all of the DHCP servers and all of the DNS servers in both of the forests. The solution must minimize the number of IPAM servers deployed. What should you recommend?
A. Two IPAM servers in the Toronto office, one IPAM server in the Montreal office, and one IPAM server in the Vancouver office
B. One IPAM server in the Toronto office
C. Two IPAM servers in the Toronto office and one IPAM server in the Montreal office
D. One IPAM server in each office
E. One IPAM server in the Montreal office and one IPAM server in the Toronto office
Answer: E

NEW QUESTION: 2Your network contains an Active Directory forest named contoso.com. You plan to deploy 200 Hyper-V hosts by using Microsoft System Center 2012 Virtual Machine Manager (VMM) Service Pack 1 (SP1). You add a PXE server to the fabric. You need to identify which objects must be added to the VMM library for the planned deployment. What should you identify? (Each correct answer presents part of the solution. Choose all that apply.)
A. A service template
B. A host profile
C. A capability profile
D. A hardware profile
E. A generalized image
Answer: B, E
Explanation: Templates and profiles are used to standardize the creation of virtual machines and services. These configurations are stored in the VMM database but are not represented by physical configuration files. There are several new types of templates and profiles in VMM, most of which are used for service creation. There are also host profiles, used for deploying a Hyper-V host from a bare-metal computer, and capability profiles, used to specify the capabilities of virtual machines on each type of supported hypervisor when virtual machines are deployed to a private cloud.
Note:
* host profile: A Virtual Machine Manager library resource that contains hardware and operating system configuration settings to convert a bare-metal computer to a managed Hyper-V host.
* capability profile: A Virtual Machine Manager

library resource that defines which resources (for example, number of processors or maximum memory) are available to a virtual machine that is created in a private cloud.

NEW QUESTION: 3 You work as a Server Administrator for company Inc. The company has a Windows-based network environment with client computers running Windows 10 and a Windows Server 2016 server. The company uses an order-processing application that accesses customer records stored in a database. The application accesses customer information through a set of WCF Web services. Which of the following server roles will you configure on the server used in your organization?
A. Windows Server Virtualization
B. Network Policy and Access Services
C. Application Server
D. DHCP Server
Answer: C
Explanation: Explanation/Reference: Explanation: You should configure the Windows Server 2016 computer as an application server. Application Server is an expanded server role of Windows Server 2016 that simplifies the process of deploying applications that respond to requests sent over the network from remote applications. Windows Server 2016 provides support for applications by enhancing application availability and accessibility through the Application Server role. The Application Server role provides environment for deploying and running line-of-business (LOB) applications that are built with the Microsoft .NET Framework version 3.0. The features provided by Application Server role are provided in the table below: During the server role installation, administrators select services that support applications that are designed to use COM+, Message Queuing, Web services, and distributed transactions. Microsoft recommends installing the Application Server role when a custom business application is deployed on the network and the developer has indicated that specific role services are required.
Incorrect Answers: A: The Windows Server Virtualization role offers services for creating and managing virtual machines and their resources. B: Network Policy and Access Services (NPAS) is a server role in Windows Server 2008. The role is a logical grouping of the following related network access technologies: Network Policy Server (NPS) Routing and Remote Access Health Registration Authority (HRA) Host Credential Authorization Protocol (HCAP) These technologies are the role services of the NPAS server role. The NPAS server role allows administrators to deploy and operate a virtual private network (VPN), dial-up networking, 802.1x protected wired and wireless access, and Cisco Network Admission Control (NAC)-based devices. D: The DHCP Server role allows you to centrally manage IP addresses and related information. This also allows you to configure client network settings at a server rather than configuring them on each client computer.
