NEW QUESTION: 1An EMC Avamar customer wants to run garbage collection outside the blackout window. What may prevent the garbage collection job from starting?**A.** HFS check is running.**B.** There is no garbage to collect.**C.** System is running in degraded mode.**D.** Restores are running.**Answer: A**

NEW QUESTION: 2Which of the following entities would be required to register with the state as a broker-dealer under the guidelines of the Uniform Securities Act (USA)?**A.** a credit union that operates within the state and provides loans to its members**B.** None of the above entities would be required to register with the state as a broker-dealer under the guidelines of the Uniform Securities Act.**C.** an agent who executes the purchase and sale of stocks and bonds for his clients**D.** an underwriter with no offices in the state that is helping a firm that is incorporated within the state with the sale of its new bond issue to insurance companies
Answer: B

NEW QUESTION: 3You've decided to authenticate the source who initiated a particular transfer while ensuring integrity of the data being transferred. You can do this by:**A.** Having the sender encrypt the message with his private key.**B.** Having the sender encrypt the hash with his private key.**C.** Having the sender encrypt the message with his symmetric key.**D.** Having the sender encrypt the hash with his public key.**Answer: B**
Explanation: Instead of using a shared-key to encrypt the hash of a given message, the sender's private key is used to encrypt the hash value of the message. This is the act of digitally signing the message. Digital Signatures provide authentication of a sender and integrity of a sender's message. A message is input into a hash function. Then the hash value is encrypted using the private key of the sender. The result of these two steps yields a digital signature. The receiver can verify the digital signature by decrypting the hash value using the signer's public key, then perform the same hash computation over the message, and then compare the hash values for an exact match. If the hash values are the same then the signature is valid. The following answers are incorrect: Having the sender encrypt the hash with his public key. This does not provide any benefit because only the sender could decrypt using his own private key and nobody else. Encrypting with a public key only provide Confidentiality and not other service. Having the sender encrypt the message with his private key. This is close but not good enough. It would only provide authenticity of the source. Having the sender encrypt the message with his symmetric key. This would provide only Confidentiality. The following reference(s) were/was used to create this question: Hernandez CISSP, Steven (2012-12-21). Official (ISC)2 Guide to the CISSP CBK, Third Edition ((ISC)2 Press) (Kindle Locations 14885-14889). Auerbach Publications. Kindle Edition.

NEW QUESTION: 4Which utility can a Citrix Administrator use to resolve the Domain Name

System (DNS) request being looked up frequently?**A.** nslookup**B.** ping**C.** curl -K -d**D.** dig +trace

Answer: DExplanation:Explanation
