But our JN0-460 exam questions can help you become more competitive easier than you can imagine.

**NEW QUESTION: 1**Scenario: Please read this scenario prior to answering the Question You have been assigned the role of Lead Enterprise Architect for a manufacturing firm that specializes in musical instruments. The firm has been established for over 100 years, operating in North America for most of that time. In the last ten years, the firm has expanded into European markets and will soon establish a market in Latin America. A future expansion into the Asia Pacific region is also planned. The firm is organized into several business units that each focus on manufacturing particular families of instruments such as brass, woodwind, and percussion. Each business unit has acquired other producers to expand its manufacturing capacity. This has resulted in a complex environment with a high diversity of business and manufacturing systems. The Enterprise Architecture (EA) program within the firm has been functioning for several years. It has made significant progress in consolidating the technology portfolio and establishing key standards. The CIO and the COO are joint sponsors of the EA program. The EA program is mature, with an active Architecture Board and a well-defined architecture process and standard content templates based on the TOGAF 9 Architecture Content Framework. The EA process framework is well coordinated with the PMO, Systems Development, and Operations functions. The firm has completed a strategic plan to reorganize its Sales & Marketing organization according to the four target geographic markets. One of the goals of this reorganization is to improve the ability of Marketing to collect more meaningful market analytics that will enable each sector to better address market needs with effective marketing campaigns and global product presence. A Request for Architecture Work to address the goals of the reorganization has been approved. As the architecture team commences its work, the CIO has expressed concerns about whether the firm will be able to adapt to the proposed architecture and how to manage the associated risks. Refer to the Scenario You have been asked

how to address the concerns of the CIO. Based on TOGAF 9, which of the following is the best answer? **A.** In Phase A, the team should use the Business Transformation Readiness Assessment technique to identify the factors that will influence the successful introduction of the architecture into the organization. The assessment should include determining the readiness rating for each factor based on a maturity scale that will allow the team to gauge the urgency, readiness, and degree of difficulty to fix. These factors can then be used to assess the initial risks associated with the proposed architecture. **B.** In Phase A, the team should conduct a Business Scenario to identify the stakeholders' concerns and the resulting retirements. Once the retirements have been identified, they can be assessed in terms of their risks. The risks should be evaluated in terms of how they could be avoided, transferred, or mitigated. Any risks that cannot be resolved should be identified as residual risks and their disposition should be decided by the Architecture Board. **C.** In Phase A the team should analyze their risk by completing an Implementation Factor Assessment and Deduction Matrix to identify the particular risks associated with the implementation and deployment. The matrix should include a list of factors to be considered, their descriptions, and constraints that should be taken into account. These factors can then be used to assess the initial risks associated with the proposed architecture. **D.** In Phase B, the team should create a set of views that will enable them to identify the factors that will influence the successful introduction of the architecture into the organization. There should then be an assessment of each factor on a maturity scale that will allow the team to gauge the urgency, readiness, and degree of difficulty to fix. These factors can then be used to assess the initial risks associated with the proposed architecture. **Answer: A**  
Explanation: Explanation/Reference: This scenario is upon Request for Architecture Work, which kicks off the Phase A, the Architecture Vision. In this phase, risk should be considered, which is also the CIO's concern in this scenario. One of the approaches in TOGAF is the Business Transformation Readiness Assessment. **Incorrect: Not B:** Implementation Factor Assessment and Deduction Matrix is used for implementation & migration planning (not B).

**NEW QUESTION: 2** **A.** The Debug-CsLisConfigurationcmdlet **B.** Microsoft Lync Connectivity Analyzer **C.** Microsoft Remote Connectivity Analyzer **D.** Network Configuration Viewer **Answer: B,C**

**NEW QUESTION: 3** View the following exhibit. Which of the following statements are true based on this configuration setting? (Choose two.) **A.** This setting will allow assigning different VDOMs from the same FortiGate to different ADOMs. **B.** This setting will allow automatic updates to the policy package configuration for a managed device. **C.** This setting is applied globally to all ADOMs. **D.** This setting will enable the ADOMs feature on FortiManager. **Answer: A,C**

**NEW QUESTION: 4** You administer a six-instance, policy-managed, multitenant RAC database CDB1 with three PDBs: PDB\_1, PDB\_2 and PDB\_3. Server pool prod\_pool has a cardinality of three and all six hosts of the cluster app. Examine these commands executed on HOST01: \$ srvctl add service -db CDB1 -pdb PDB\_1 service AR -serverpool prod\_pool -cardinality singleton \$ srvctl start service -db CDB1 -service AR Which two statements are true regarding the AR service? **A.** AR is available on any one available CDB1 instance in prod\_pool at any one time. **B.** AR is available only on the CDB1 instance on HOST01. **C.** AR runs as a singleton service in the server pool prod\_pool and the AR service is available in each of the CDB1 instances. **D.** AR can fail over to any other available CDB1 instance in prod\_pool. **E.** AR can fail over to any one of the available CDB1 instances. **Answer: B,E**
