**Answer: A** Explanation: Explanation No, as Server4 is a Windows Server 2012R2 which does not meet the requirements of Remote Credential Guard.  
<https://docs.microsoft.com/en-us/windows/access-protection/remote-credential-guard>  
Remote Credential Guard requirements To use Windows Defender Remote Credential Guard,

the Remote Desktop client and remote host must meet the following requirements:  
The Remote Desktop client device: Must be running at least Windows 10, version 1703 to be able to supply credentials. Must be running at least Windows 10, version 1607 or Windows Server 2016 to use the user's signed-in credentials. This requires the user's account be able to sign in to both the client device and the remote host. Must be running the Remote Desktop Classic Windows application. The Remote Desktop Universal Windows Platform application doesn't support Windows Defender Remote Credential Guard. Must use Kerberos authentication to connect to the remote host. If the client cannot connect to a domain controller, then RDP attempts to fall back to NTLM. Windows Defender Remote Credential Guard does not allow NTLM fallback because this would expose credentials to risk.  
The Remote Desktop remote host: Must be running at least Windows 10, version 1607 or Windows Server 2016. Must allow Restricted Admin connections. Must allow the client's domain user to access Remote Desktop connections. Must allow delegation of non-exportable credentials.
