The session state information of App1 is stored in a Microsoft SQL Server 2012 database.The network contains four subnets.You discover that all of the users from a subnet named Subnet1 always connect to the same NLB node.You need to ensure that all of the users from each of the subnets connect equally across all of the nodes in Cluster1.What should you modify from the port settings?To answer, select the appropriate setting in the answer area.**Answer:** Explanation:

**NEW QUESTION: 3**You have been asked to design the storage layer for an application. The application requires disk performance of at least 100,000 IOPS. In addition, the storage layer must be able to survive the loss of an individual disk, EC2 instance, or Availability Zone without any data loss. The volume you provide must have a capacity of at least 3 TB.Which of the following designs will meet these objectives?**A.** Instantiate an i2.8xlarge instance in us-east-1a. Create a RAID 0 volume using the four 800GB SSD ephemeral disks provided with the instance. Provision 3x1TB EBS volumes, attach them to the instance, and configure them as a second RAID 0 volume. Configure synchronous, block-level replication from the ephemeral-backed volume to the EBS-backed volume.**B.** Instantiate a c3.8xlarge instance in us-east-1. Provision 4x1TB EBS volumes, attach them to the instance, and configure them as a single RAID 5 volume. Ensure that EBS snapshots are performed every 15 minutes.**C.** Instantiate an i2.8xlarge instance in us-east-1a. **NEW QUESTION: 4** How is a dynamic vNIC allocated?  
**A.** Dynamic vNICs are bound directly to a service profile.  
**B.** Dynamic vNICs are assigned by binding a port profile to the service profile.  
**C.** Dynamic vNICs can only be bound to the service profile through an updating template.  
**D.** Dynamic vNICs are assigned to VMs in vCenter.  
**Answer: A**  
**Explanation:** Explanation The dynamic vNIC connection policy determines how the connectivity between VMs and dynamic vNICs is configured. This policy is required for Cisco UCS domains that include servers with VIC adapters on which you have installed VMs and configured dynamic vNICs. Each dynamic vNIC connection policy includes an Ethernet adapter policy and designates the number of vNICs that can be configured for any server associated with a service profile that includes the policy. For VM-FEX that has all ports on a blade in standard mode, you need to use the VMware adapter policy. For VM-FEX that has at least one port on a blade in high-performance mode, use the VMware PassThrough adapter policy or create a custom policy. If you need to create a custom policy, the resources provisioned need to equal the resource requirements of the guest OS that needs the most resources and for which you will be using high-performance mode.
