NEW QUESTION: 4 Scenario 6A customer recently implemented an EMC Avamar solution in their primary data center. The environment consists of several Microsoft applications, including Microsoft SharePoint, Exchange, and SQL. An EMC Data Domain system was also deployed behind Avamar as the backup destination for these applications. There are also several file system clients that have been configured to back up directly to the Avamar server. One Avamar server and two Data Domain systems have been deployed to support this configuration. The Avamar server is operating close to full capacity and there is no room for expansion since it is already fully provisioned with the maximum number of nodes. The Data Domain systems have plenty of capacity left; each system is currently at 35% of utilization. Refer to Scenario 6. The customer realized that one of the SharePoint clients was incorrectly configured to be backed up to the Avamar server instead of the Data Domain system. How can this be fixed?**A.** Reinstall the SharePoint GLR plug-in, selecting Data Domain**B.** Reconfigure the client to Data Domain and perform a fastcopy operation to move the backup data to the intended system**C.** Create another Avamar domain with Data Domain as a device, and then move the client to the new domain**D.** Reconfigure the client to Data Domain and perform a full backup**Answer: D**
