**NEW QUESTION: 2**Refer to the exhibit.EIGRP had converged in AS 1 when the link between router R1 and R2 went down. The console on router R2 generated the following messages:  
\*Mar 20 12:12:06: %DUAL-5-NBRCHANGE. IP-EIGRP 1: Neighbor 10.1.4.3 (Serial0) is down: stuck in active\*  
\*Mar 20 12:15:23: %DUAL-3-SIA. Route 10.1.1.0/24 stuck-in-active state in IP-EIGRP 1.  
Cleaning up  
The network administrator issued the show ip eigrp topology active command on R2 to check the status of the EIGRP network. Which statement best describes the reason for the error messages?**A. Incorrect bandwidth configuration on router R3 prevents R2 from establishing neighbor adjacency.B. Router R5 did not reply to the query about network 10.1.1.0/24 sent by router R2 .C. Router R3 did not reply to the query about network 10.1.1.0/24 sent by router R2 .D. Incorrect bandwidth configuration on router R5 prevents R2 from establishing neighbor adjacency.****Answer: C****Explanation:**Explanation When the link between R1 and R2 is down, R2 loses its successor for the network 10.1.1.0/24. R2 checks its topology table for a feasible successor but it can't find one. So R2 goes active on the that route to find a new successor by sending queries out to its neighbors (R3 and R5) requesting a path to the lost route. Both R3 and R5 also go "active" for the that route. But R5 doesn't have any neighbor to ask besides R2 so it will send an "unreachable message" to indicate it has no alternative path for that route and has no other neighbor to query. R3 also checks its EIRGP topology table for a feasible successor but it has none, too. Unlike R5, R3 has a neighbor (R4) so it continues to query this router. Now suppose there is a problem on the link between R3 and R4 so R4 never receives the query from R3 and of course, R3 also never receives a reply back from R4. Therefore, R3 can't reply back to R2. After about 3 minutes, the "Stuck in active" (SIA) timer on R2 expires and R2 marks the route 10.1.1.0/24 as "stuck in active" route. The output line "via

10.1.3.3 (Infinity/Infinity), r, Seiral0, serno 1232 indicates R2 has sent a query to 10.1.3.3 and is waiting for a reply (the lowercase r). **NEW QUESTION: 3** You have an Azure subscription that contains an Azure Directory (Azure AD) tenant named contoso.com. The tenant is synced to the on-premises Active Directory domain. The domain contains the users shown in the following table. You enable self-service password reset (SSPR) for all users and configure SSPR to have the following authentication methods: \* Number of methods required to reset: 2 \* Methods available to users: Mobile phone, Security questions \* Number of questions required to register: 3 \* Number of questions required to reset: 3 You select the following security questions: \* What is your favorite food? \* In what city was your first job? \* What was the name of your first pet? For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

**Answer:** Explanation: Explanation Box 1: No Administrator accounts are special accounts with elevated permissions. To secure them, the following restrictions apply to changing passwords of administrators: On-premises enterprise administrators or domain administrators cannot reset their password through Self-service password reset (SSPR). They can only change their password in their on-premises environment. Thus, we recommend not syncing on-prem AD admin accounts to Azure AD. An administrator cannot use secret Questions & Answers as a method to reset password. Box 2: Yes Self-service password reset (SSPR) is an Azure Active Directory feature that enables employees to reset their passwords without needing to contact IT staff. Box 3: Yes References: <https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-sspr-deployment>
