NEW QUESTION: 1 What are the main functions implemented by the FusionAccess component WI?**A.** virtual machine HDA interact collected HDA virtual machine state and the state reported by the access**B.** Protocol gateway for desktop access, isolation of internal and external networks, and transmission encryption**C.** Desktop access login load balancing**D.** Provide access to the end user interface**Answer: D**

NEW QUESTION: 2 Which two forms of abstraction can a programmer use in Java?**A.** enums**B.** abstract classes**C.** interfaces**D.** concrete classes**E.** primitives**F.** primitive wrappers**Answer: B,C** Explanation:Explanation/Reference:Explanation:When To Use InterfacesAn interface allows somebody to start from scratch to implement your interface or implement your interfacein some other code whose original or primary purpose was quite different from your interface. To them,your interface is only incidental, something that have to add on to the their code to be able to use yourpackage. The disadvantage is every method in the interface must be public. You might not want to exposeeverything.*When To Use Abstract classesAn abstract class, in contrast, provides more structure. It usually defines some default implementationsand provides some tools useful for a full implementation. The catch is, code using it must use your class asthe base. That may be highly inconvenient if the other programmers wanting to use your package havealready developed their own class hierarchy independently. In Java, a class can inherit from only one baseclass. *When to Use BothYou can offer the best of both worlds, an interface and an abstract class. Implementors can ignore yourabstract class if they choose. The only drawback of doing that is calling methods via their interface name isslightly slower than calling them via their abstract class name.Reference: http://mindprod.com/jgloss/interfacevsabstract.html

NEW QUESTION: 3コードの断片を考えると：Which code fragment prints red: blue: sma11: medium: ?**A.** Option B**B.** Option C**C.** Option A**D.** Option D**Answer: A**

NEW QUESTION: 4 Ein Router, auf dem EIGRP ausgeführt wird, hat dieselbe Route aus zwei verschiedenen Pfaden gelernt. Welchen Parameter verwendet der Router, um den besten Pfad

auszuwählen?**A.** Verwaltungsabstand**B.** as-pathWenn ein Router aus demselben Routing-Protokoll zwei verschiedene Pfade für dasselbe Netzwerk lernt, muss er entscheiden, welche Route besser ist, und wird in die Routing-Tabelle aufgenommen. Metrik ist das Maß, mit dem entschieden wird, welche Route besser ist (niedrigere Anzahl ist besser). Jedes Routing-Protokoll verwendet eine eigene Metrik. Beispielsweise verwendet RIP die Anzahl der Hops als Metrik, während OSPF die Kosten verwendet.
https://study-ccna.com/administrative-distance-metric/**C.** Kosten**D.** Metrik**Answer: D**
