All these versions of ANS-C01 test engine questions include the key point information that you need to know to pass the test.

**NEW QUESTION: 1**The company has considered several alternatives for replacing the hardware required for a regional center's processing. An advantage of using a third-party cold site is that:**A.** The replacement site could be up and running in a few hours.**B.** Travel expenses would be minimized for company personnel.**C.** Personnel employed at the site would be familiar with company operations.**D.** No additional equipment would be required at the regional centers.**Answer: D****Explanation:**A cold site backup facility is a shell facility where the user can quickly install computer equipment and resume operations in the event of a disaster. The facility has all of the needed assets in place except the needed computer equipment and is vendor-dependent for timely delivery of equipment. Accordingly, an advantage of using a third-party cold site is the elimination of the need for additional equipment. An automobile and personal property insurer has decentralized its information processing to the extent that headquarters has less processing capacity than any of its regional processing centers. These centers are responsible for initiating policies, communicating with policyholders, and adjusting claims. The company uses leased lines from a national telecommunications company. Initially, the company thought there would be little need for interregion communication, but that has not been the case. The company underestimated the number of customers that would move between regions and the number of customers with claims arising from accidents outside their

regions. The company has a regional center in an earthquake-prone area and is planning how to continue processing if that center, or any other single center, were unable to perform its processing.

**NEW QUESTION: 2** DRAG DROP Your company, Coho Vineyard, uses Microsoft Exchange Online. Coho Vineyard employees have email addresses on the domain cohovineyard.com. Coho Vineyard recently purchased the domain cohowinery.com. All employees of Coho Vineyard who work in the winery department should have an additional email address combining their current email alias with the domain cohowinery.com. Outgoing email messages must be sent from the existing cohovineyard.com email addresses. You need to add the cohowinery.com email addresses. Which three Windows PowerShell commands should you run in sequence? To answer, move the appropriate commands from the list of commands to the answer area and arrange them in the correct order.**Answer:** Explanation: Explanation: Box 1: Box 2: Box 3: Box 1: This command is used to return a list of users who work in the winery department and store the results in the \$Users variable. Box 2: This command says for each user name, take the user's alias, prepend SMTP: and append @cohowinery.com and add the new address to any existing addresses(\$\_.EmailAddresses). For example, for a user with an alias of John.Smith, the following email address would be created: SMTP:[email#160;protected]. That would then be added to his existing email address. Box 3: The following PowerShell cmdlet can be used to define the email address for User1's mailbox: Set-Mailbox -Identity user1 -EmailAddresses <list of email addresses>. As Box 2 added the new @cohowinery.com address to the existing @cohovineyard.com address, we can use the \$\_.EmailAddresses value with the -EmailAddresses parameter instead of manually listing the addresses.
