NEW QUESTION: 1 Guards are appropriate whenever the function required by the security program involves which of the following?
A. The use of discriminating judgment
B. The use of physical force
C. The need to detect unauthorized access
D. The operation of access control devices
Answer: A
Explanation: Explanation/Reference: The use of discriminating judgment, a guard can make the determinations that hardware or other automated security devices cannot make due to its ability to adjust to rapidly changing conditions, to learn and alter recognizable patterns, and to respond to various conditions in the environment. Guards are better at making value decisions at times of incidents. They are appropriate whenever immediate, discriminating judgment is required by the security entity. The following answers are incorrect: The use of physical force This is not the best answer. A guard provides discriminating judgment, and the ability to discern the need for physical force. The operation of access control devices A guard is often uninvolved in the operations of an automated access control device such as a biometric reader, a smart lock, mantrap, etc. The need to detect unauthorized access The primary function of a guard is not to detect unauthorized access, but to prevent unauthorized physical access attempts and may deter social engineering attempts. NEW QUESTION: 3 Which IP phone hardening technique will prevent call signaling and media stream tampering?
A. store IP phone configuration files on the SFTP server
B. deploy

authentication and encryption between IP phones and Cisco Unified Communications Manager
C. disable GARP**D.** disable PC. to-voice VLAN access**E.** use MIC firmware images signed by Cisco
Answer: B Explanation: Explanation/Reference: Chapter 16: Implementing Security in CUCM
pg.441- IP Phone and the server can exchange SCCP or SIP signaling messages in a secure way
by using TLS packet authentication and encryption.- The authenticated and encrypted TLS
session ensures the integrity and authenticity of each signaling message that is exchanged
between the two devices.

NEW QUESTION: 4 A company designed a specialized Amazon EC2 instance configuration for its
Data Scientists. The Data Scientists want to create and delete EC2 instances on their own, but
are not comfortable with configuring all the settings for EC2 instances without assistance. The
configuration runs proprietary software that must be kept private within the company's AWS
accounts and should be available to the Data Scientists, but no other users within the accounts.
Which solution should a SysOps Administrator use to allow the Data Scientists to deploy their
workloads with MINIMAL effort?
A. Distribute an AWS CloudFormation template containing the EC2 instance configuration to the
Data Scientists from an Amazon S3 bucket. Set the S3 template object to be readable from the
AWS Organization orgid.
B. Publish the instance configuration to the Private Marketplace. Share the Private Marketplace
with the company's AWS accounts. Allow the Data Scientists to subscribe and launch the product
from the Private Marketplace.
C. Upload an AWS CloudFormation template to AWS Service Catalog. Allow the Data Scientists
to provision and deprovision products from the company's AWS Service Catalog portfolio.
D. Create an Amazon Machine Image (AMI) of the EC2 instance. Share the AMI with authorized
accounts owned by the company. Allow the Data Scientists to create EC2 instances with this
AMI.
Answer: C
