And if we have a new version of your C1000-180 study guide, we will send an E-mail to you, Would you like to have more opportunities to get promoted, What should I do if I need assistance?

Our C1000-180 study materials are selected strictly based on the real C1000-180 exam and refer to the exam papers in the past years, Photoexperienceacademy offers the most valid IBM C1000-180 Exam dumps for the preparation of the IBM Certification exam to ensure your success in one try only.

Don't worry, with our C1000-180 Study Material, your preparing for the exam will be more efficient and easily.

NEW QUESTION: 1What estimation technique is an agile team using when collectively estimating the relative size of its stories using story points?**A.** Affinity**B.** Parametric**C.** Planning poker**D.** One-to-one comparison**Answer: C**

NEW QUESTION: 2You need to ensure that the application uses RunLogRoleProvider custom role provider.How should you modify the web.config file? (To answer, drag the appropriate line of code to the correct location or locations. Each line of code may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)**Answer:** Explanation:Explanation

NEW QUESTION: 3Which value is not used by the Cisco IPS appliance in the risk rating calculation?**A.** attack severity rating**B.** watch list rating**C.** promiscuous delta**D.** signature fidelity rating**E.** target value rating**F.** threat rating adjustment**Answer: F****Explanation:** http://www.cisco.com/en/US/prod/collateral/vpndevc/ps5729/ps5713/ps4077/prod_white_paper09_00aecd806e7299.htmlRisk Rating Calculation Risk rating is a quantitative measure of your network's threat level before IPS mitigation. For each event fired by IPS signatures, Cisco IPS Sensor Software calculates a risk rating number. The factors used to calculate risk rating are:Signature fidelity rating: This IPS-generated variable indicates the degree of attack certainty.Attack severity rating: This IPS-generated variable indicates the amount of damage an attack can cause.Target value rating: This user-defined variable indicates the criticality of the attack target. This is the only factor in risk rating that is routinely maintained by the user. You can assign a target value rating per IP address in Cisco IPS Device Manager or Cisco Security Manager. The target value rating can raise or lower the overall risk rating for a network device. You can assign the following target values:-75: Low asset value-100: Medium asset value-200: Mission-critical asset valueAttack relevancy rating: This IPS-generated value indicates the vulnerability of the attack target.Promiscuous delta: The risk rating of an IPS deployed in promiscuous mode is reduced by the promiscuous delta. This is because promiscuous sensing is less accurate than inline sensing. The promiscuous delta can be configured on a per-signature basis, with a value range of 0 to 30. (The promiscuous delta was introduced in Cisco IPS Sensor Software Version 6.0.)Watch list rating: This IPS-generated value is based on data found in the Cisco Security Agent watch list. The Cisco Security Agent watch list contains IP addresses of devices involved in network scans or possibly contaminated by viruses or worms. If an attacker is found on the watch list, the watch list rating for that attacker is added to the risk rating. The value for this factor is between 0 and 35. (The watch list rating was introduced in Cisco IPS Sensor Software Version 6.0.) The formula to calculate risk rating in Cisco IPS Sensor Software Version 6.0 is: Risk rating can help enhance your productivity as it

intelligently assesses the level of risk of each event and helps you focus on high-risk events.
