If you use AWS SAM to create your serverless application, it comes built-in with AWS CodeDeploy to help ensure safe Lambda deployments. With just a few lines of configuration, AWS SAM does the following for you:
* Deploys new versions of your Lambda function, and automatically creates aliases that point to the new version.
* Gradually shifts customer traffic to the new version until you are satisfied that it's working as expected, or you roll back the update.
* Defines pre-traffic and post-traffic test functions to verify that the newly deployed code is configured correctly and your application operates as expected.
* Rolls back the deployment if CloudWatch alarms are triggered.
