NEW QUESTION: 1You have an Azure Active Directory (Azure AD) tenant that contains the users shown in the following table.From Azure AD Privileged Identity Management (PIM), you configure the settings for the Security Administrator role as shown in the following exhibit. From PIM, you assign the Security Administrator role to the following groups:* Group1: Active assignment type, permanently assigned* Group2: Eligible assignment type, permanently eligibleFor each of the following statements, select Yes if the statement is true. Otherwise, select No.NOTE: Each correct selection is worth one point.**Answer:** Explanation:Explanation Box 1: YesEligible Type: A role assignment that requires a user to perform one or more actions to use the role. If a user has been made eligible for a role, that means they can activate the role when they need to perform privileged tasks. There's no difference in the access given to someone with a permanent versus an eligible role assignment. The only difference is that some people don't need that access all the time.You can choose from two assignment duration options for each assignment type (eligible and active) when you configure settings for a role. These options become the default maximum duration when a user is assigned to the role in Privileged Identity Management.Use the Activation maximum duration slider to set the maximum time, in hours, that a role stays active before it expires. This value can be from one to 24 hours.Box 2: YesActive Type: A role assignment that doesn't require a user to perform any action to use the role. Users assigned as active have the privileges assigned to the role Box 3: Yes User3 is member of Group2.Reference:
